SOP - Starting an AWE worker

Skyport 2

<u>Authors</u>: Wolfgang Gerlach, Andreas Wilke, Folker Meyer

<u>Version</u>: 0.2

<u>Audience</u>:
This document is intended for users who are familiar with docker and git.

<u>Requirements</u>:
- You have finished SOP - Skyport2 quick setup
- Started Skyport2 stack
- docker

<u>Known limitations</u>:

<u>Introduction</u>:

This SOP describes the steps necessary to add additional AWE worker on your local host after starting skyport2 locally.

<u>SOP</u>:

1. You need to know the address of the SKYPORT_HOST
2. We assume that you have already done

```
>    git clone --recursive https://github.com/MG-RAST/Skyport2.git
>    cd Skyport2
```

3. Execute the start-awe-worker script

```
>    ./start-awe-worker.sh -S <SKYPORT_HOST>
```

By default the worker will store temporary data in `pwd`/tmp, but you can change that behavior via the -d parameter
